

Phishing Simulation Awareness Report

Organization: Internee.pk

Date: August 21, 2025

Tool Used: GoPhish

Summary:

A phishing simulation was conducted to evaluate employee awareness.

Emails mimicked common phishing scenarios such as password reset and suspicious login alerts.

Key Results:

- 60% of employees clicked on the phishing link
- 20% submitted credentials on the fake landing page
- 40% reported the phishing email

Conclusion:

The campaign highlights the need for continuous security awareness training.

Recommendations include:

- Conducting regular phishing simulations
- Enforcing 2FA across all accounts
- Running workshops on identifying suspicious emails
